Business Name and Logo

The VeggieKusina Co.'s name captures the playful and attractive idea behind the product. Veggie showcases that our product is vegetable-based, healthy, and meat-free, while Kusina, a kitchen where Filipinos prepare or cook food, gives it a local and homey touch. The name is easy to remember and unique to Filipinos because instead of using meat, we use vegetables to create a healthy, delicious, and exceptional product.

The VeggieKusina logo is designed to show a creative concept of the product. It shows the ingredients that we use which are the chaote, carrots, cabbage, Baguio beans and also the topping of the Veggie sisig which is the white onion and green chili.

Product Name

The product is named Veggies Sisig. The term "veggies" represents vegetables which include all edible plant parts suitable for cooking and consumption. Vegetables can be eaten either raw or cooked and play an important role in human nutrition, being mostly low in fat and carbohydrates, but high in vitamins, minerals and dietary fiber while "sisig" refers to a beloved Filipino dish that people commonly eat as a main course or appetizer.

The name represents the harmonious union of two different tastes which results in a distinctive savory experience. The name Veggies Sisig creates an immediate and memorable brand identity that showcases the innovative nature of the product. The name stands out easily while being straightforward to say and it directly communicates the fusion of different culinary traditions into one dish.

Trends and Issues

The Sisig aims to explore how the economy is experiential value, measured through consumer return on investment. According to the Current Journal of Applied Science and Technology Year (2024) it indicates that the coconut meat Sisig recipe is highly acceptable in appearance, color, aroma, taste, and texture. Incorporative Innovation of all Veggie Sisig Recipes are the primary ingredients that receive a positive reception which demonstrates the dish's potential for favorable adaptation in the culinary preference of this target group.

The trends about the veggies on our product like carrots, cabbage, Baguio beans, and chayote. According to II International Symposium on Carrot and Other Apiaceae 1264, (1-8, 2018) Carrot growers have benefitted from the development of a reliable system to produce hybrid cultivars with improved uniformity, market value, and disease tolerance, and given the wide variation that occurs in diverse germplasm for production traits, future opportunities exist to further improve disease and pest resistance, weed competitiveness, flowering time, and seed yield. According to Journal of New Seeds 6 (2-3), 75-107, (2004) Cabbage is an important vegetable crop of the family Brassicaceae and is grown in many countries of the globe. There are different types of cabbage depending on shape, size, and color. It is a highly cross-pollinated crop where heterosis in F1 hybrid progeny has been exploited so largely in developing countries too.

According to Food Chemistry 275, 557-568, (2019) Chayote (*Sechium edule*) has gained widespread consumer acceptance and is recognized by its nutritional and bio-functional properties. The present review surveys and describes the current findings about the nutritional, phytochemical, and pharmacological properties of chayote and identifies opportunities for further research. It also discusses chayote's versatile utility in nutrition, as a

functional ingredient in food, cosmetic, and pharmaceutical industries, as well as in nanotechnology and biotechnological processes. According to Mountain Journal of Science and Interdisciplinary Research (formerly Benguet State University Research Journal) 77, 30-44, (2017) Snap bean is an important vegetable legume in the Northern Philippines. To meet the demands of snap bean farmers and consumers for better commercial varieties, the snap bean breeding program team has continued developing and identifying at the BSU-IPB Highland Crops Research Station (HCRS), accessions and advanced breeding lines as promising varieties not only for the highlands but also for the mid-elevation areas and lowlands.

One of the primary issues is the cost, since most of the ingredients of veggie sisig are seasonal such as the cabbage, carrots, and baguio beans. According to Produce Leaders (2024), those vegetables that are seasonal can increase the cost of production during the limited supply of fresh produce. It can affect the overall pricing strategy of the product.

To ensure the availability of supplies using frozen fresh produce during top production, to preserve the quality and cost during off seasons, and to control the atmosphere of the storage can extend the shelf life of the vegetables such as cabbage and carrots for less fluctuating and slower use throughout the year.

Another issue is that vegetables are highly perishable, meaning vegetables spoil quickly because of their high water content, soft structure, and exposure to bacteria and molds (2025). Vegetables such as cabbage and mushrooms are high in moisture. It creates an ideal place for bacteria, mold, and yeast to grow. Also, mushrooms and greens, and other vegetables can get slimy and rot easily if they are left in a moist and warm place. Because of this, the spoilage process starts in just a few hours or days. According to the United States Food and Drug Administration (FDA, 2023) to ensure food safety and prevent the growth of harmful microorganisms in the food. The storage temperature, pH, and water activity must be controlled and monitored. Storing the food at the right temperature slows the harmful microorganisms and slows down the spoilage of the vegetables

Despite that sisig is very famous particularly in the region of Pampanga for its unique taste, it is also high in cholesterol and fat, raising health concerns wikimd (2025). Though health-conscious individuals usually seek alternative ingredients to enjoy sisig without worrying about their health. According to Theodelicious (2022), Many individuals are now seeking alternative food products to avoid high cholesterol, especially those who are health-conscious. Therefore plant-based options like legumes, tofu, and vegetable-based meals are now gaining popularity. For example is the Tofu sisig is a healthier plant-based alternative to the traditional pork sisig we This version of sisig uses deep-fried tofu cubes and spices for a bold flavor without using any dairy or meat Panlasangpinoy (2022)

Product Innovation

In the Philippines, Filipinos like pork sisig so much, that's why we thought of a product that can blend perfectly with healthy food. We discovered that the majority of our fellow Filipinos hate "Vegetables" so we thought of a "Veggie Sisig" that can perfectly blend taste by using vegetables instead of pork to have nutrients. The innovation lies in transforming into classic Filipino healthy food instead of using pork-based sisig. It brings the same sisig experience. We wanted to have a good taste and nutrients for our product. This version replaces nutritious vegetables and plant proteins.

Product Diagram

Objectives

Short term

- Providing some free taste to the people, classmates, friends, family, and others who can give feedback about the taste, the packaging style and the product in general.
- Promote through social media: By posting pictures or videos of our product, we can encourage other people by telling them the benefits of our product.
- Conduct taste tests with target consumers to gather feedback and make necessary adjustments to improve taste, texture, and overall product quality.

- Take down the cost and all the materials, the container, and the price of the product. While working on this, we will figure out the profit at the same time.
- Opening small stalls in malls during occasions like Christmas seasons to make the product more accessible to the public

Long term

- The word "Collaborates" If you're new in business, it's better to make a collaboration with the other store. It gains profit and commission from the product.
- Once your product is doing well, start selling your product in your neighborhood, school/ near school, or through social media.
- Develop an online pre-order and delivery system to provide convenience for local customers and enhance the business's accessibility.
- Join Competitions or Events: By joining bazaars, school fairs, or other contests that increase our customer base.
- Partner with influencers, chefs, or celebrities to co-brand special items.

Estimated Product Costing

Ingredients	Quantity	Unit Cost	Total
Carrots	Large, 4pcs	₱10.75 x 4	₱43.00
Cabbage	Medium, ¼	₱14.50	₱14.50
Baguio Beans	140 kg	₱35	₱35.00
Chayote	1pc Medium & Large	₱13+16	₱29.00
Flour	½ Cup	₱30	₱30.00
Mayonnaise	1pcs 220ml	₱84	₱84.00
Oyster Sauce	1pcs	₱7	₱7.00

Margarine	3pcs	₱10 x 3	₱30.00
White onion	1pcs, 100 kg	₱24	₱24.00
Lime	10pcs	₱5	₱5.00
Green Chili	3pcs	₱5	₱5.00
Ground black pepper	1 sachet	₱5	₱5.00
Salt	1 sachet	₱5	₱5.00
Packaging	25pcs	₱75	₱75.00
			TOTAL: ₱390
