Business Name and Logo

The Veggies Kusina Co.'s name captures the playful and attractive idea behind the product. Veggie showcases that our product is vegetable-based, healthy, and meat-free, while Kusina, a kitchen where Filipinos prepare or cook food, gives it a local and homey touch. The name is easy to remember and unique to Filipinos because instead of using meat, we use vegetables to create a healthy, delicious, and exceptional product.

The Veggies Kusina logo is designed to show a creative concept of the product. It shows the ingredients that we use which are the chaoyote, carrots, cabbage, Baguio beans and also the topping of the Veggies sisig which is the white onion and green chili.

Product Name

The product is named Veggies Sisig. The term "veggies" represents vegetables which include all edible plant parts suitable for cooking and consumption. Vegetables can be eaten either raw or cooked and play an important role in human nutrition, being mostly low in fat and carbohydrates, but high in vitamins, minerals and dietary fiber while "sisig" refers to a beloved Filipino dish that people commonly eat as a main course or appetizer.

The name represents the harmonious union of two different tastes which results in a distinctive savory experience. The name Veggies Sisig creates an immediate and memorable brand identity that showcases the innovative nature of the product. The name stands out easily while being straightforward to say and it directly communicates the fusion of different culinary traditions into one dish.

Trends and Issues

The Sisig is aims to explore how the economic is experiential value, measured through consumer return to investment. According to Current Journal of Applied Science and The Sisig is aims to explore how the economic is experiential value, measured through Technology Year (2024) it indicates that the coconut meat Sisig recipe, is highly acceptable in appearance, color, aroma, taste, and texture. In corporative Innovation of all veggie Sisig Recipe is the primary ingredients that receive a positive reception that demonstrate the dish potential for favorable adaption in a culinary preference of this target group.

According to II International Symposium on Carrot and Other Apiaceae 1264, (1-8, 2018) Carrot growers have benefitted from the development of a reliable system to produce hybrid cultivars with improved uniformity, market value, and disease tolerance, and given the wide variation that occurs in diverse germplasm for production traits, future opportunities exist to further improve disease and pest resistance, weed competitiveness, flowering time, and seed yield. And according to Journal of New Seeds 6 (2-3), 75-107, 2004 Cabbage is an important vegetable crop of the family Brassicaceae and is grown in many countries of the globe. There are different types of cabbage depending upon shape, size, and color. It is a highly cross-pollinated crop where heterosis in F1 hybrid progeny has been exploited so largely in developing countries too.

According to Food chemistry 275, 557-568, (2019) Chayote (*Sechium edule*) has gained widespread consuming acceptance and recognized by its nutritional and bio-functional properties. The present review surveys and describes the current findings about the nutritional, phytochemical and pharmacological properties of chayote and identifies opportunities for further research. It also discusses chayote's versatile utility in nutrition, as a functional ingredient in food, cosmetic and pharmaceutical industries, as well as in nanotechnology and biotechnological processes. Nevertheless, According to Mountain Journal of Science and Interdisciplinary Research (formerly Benguet State University Research Journal) 77, 30-44, (2017) Snap bean is an important vegetable legume in the Northern Philippines. To meet the demands of snap bean farmers and consumers for better commercial varieties, the snap bean breeding program team has continued developing and identifying at the BSU-IPB Highland Crops Research Station (HCRS), accessions and advanced breeding lines as promising varieties not only for the highlands but also for the mid-elevation areas and low lands.

One of the most beloved dishes in the Filipino cuisine is the pork sisig originated from Pampanga, it is known for its savory flavor, rich and the hot platter presentation, traditionally, it's made with the fatty parts of the pork such as the ears, snout and cheeks together with chicken liver seasoned with onions, chili peppers and calamansi. But despite its irresistible flavor, this version of sisig comes with health concerns. Caused using high fat meat cuts and organs meat, particularly sisig is often high in fats, sodium and cholesterol. Repeated consumption of such ingredients may cause to an increased risk of hypertension, heart disease and other illnesses. (Ph T, 2024)

In response to these concerns, we introduced a vegetable-based sisig that transform the traditional dish with the health in mind. Instead of using fatty parts of the pork our version uses vegetables like sayote, baguio beans, cabbage and carrots and other fresh vegetables. These vegetables are naturally low in saturated fat and contains no cholesterol. According to Dias (2019) The given vegetables such as sayote, carrot, cabbage and mushroom not only enhance the healthy nutritional profile of the meals but also it contributes to disease prevention, other chronic diseases and the overall wellness. Not only our vegetable sisig retain the tangy, bold and savory flavors that Filipino people love, it also provides guilt free way to enjoy a Filipino favourite. By using vegetables to replace the pork in the traditional sisig, We are offering a healthy and sustainable alternative for pork parts that fits today's health conscious lifestyles, If you're maintaining your cholesterol at the right level, for those people that are reducing meat intake, or simply just looking for lighter meal option, Our own vegetable sisig is a perfect solution it proves that healthy eating does not have to sacrifice flavor .

As stated by Mutchler (2025) baguio beans are nutrient-dense and low-calorie providing a plant protein, vitamins K, A, C, folate, fiber, and minerals such as iron and potassium. their antioxidants supports the bone, heart, digestive, immune, eye, prenatal, and mood health also contributing to maintaining a healthy weight and cancer prevention. Their high calcium and vitamin K content helps to strengthen bones and help to reduce the risk of osteoporosis. While the potassium, fiber and folate in green beans supports our cardiovascular health by lowering the bad cholesterol and regulate the blood pressure. Additionally the iron in green beans helps the red blood cell production reducing the risk of having anemia and their antioxidants content may protect us against certain types of cancer including breast, colon and prostate cancer. Overall baguio beans are nutritious vegetable that supports in multiple aspects of health from immunity and digestion to mood and chronic disease prevention.

Chayote is a low-calorie, nutritional squash boosting fiber, folate, Vitamin C and antioxidants. Chayote contain compounds that protects against fat buildup in the liver, which may cause a fatty liver disease. they also found out that phytochemicals in the chayote can reduce the blood pressure and improve blood flow. It is also rich in antioxidants including myricentin that helps to lower the cholesterol levels and reduce inflammation also protects against free radicals to reduce the risk of developing certain diseases like heart disease and cancer. Chayote is low in carbohydrates and it is a good source of fiber a nutritious combination that can help to maintain blood sugar levels. Overall it stated that chayote contains vitamins and minerals including vitamin C, folate, vitamin K, B6 copper, manganese and zinc also calcium and iron. WebMd Editorial Contributor (2024, December 30).

According to *Acta Scientiarum Polonorum Hortorum Cultus* 14 (2), 75-85, (2015) Small size of cabbage heads around 2.0 kg, preferred by the fresh market, may be attained by the choice of cultivar suitable for such purpose of production as well as culture practice, including reasonable rate of fertilization. The aim of the study was to evaluate the impact of increasing plant population combined with differentiated dose of nitrogen on yield of cabbage, its structure and plant composition. White head cabbage 'Kalorama F1' cv. was planted in rows 45 cm apart and 50, 40, 35 or 30 cm within rows, which assured 44 000, 55 000, 63 000 and 74 000 plants per 1 ha, respectively. Nitrogen at the rates of 150 or 300 kg ha⁻¹ was used in 3 equal doses supplied as preplant and top dressing fertilization. Data obtained in the trial indicate that the dose of 150 kg N ha⁻¹ was a limiting factor for the increment of crop yield in higher than 44 000 plant population per 1 ha. In the case of application the dose of 300 kg N ha⁻¹ plants grown in population 63 000.

According to *Food and Nutrition Sciences* 5 (22), 2147, 2014 Carrot is a root vegetable with carotenoids, flavonoids, polyacetylenes, vitamins, and minerals, all of which possess numerous nutritional and health benefits. Besides lending truth to the old adage that carrots are good for eyes, carotenoids, polyphenols and vitamins present in carrot act as antioxidants, anticarcinogens, and immunoenhancers. Anti-diabetic, cholesterol and cardiovascular disease lowering, anti-hypertensive, hepatoprotective, renoprotective, and wound healing benefits of carrot have also been reported. The cardio- and hepatoprotective, anti-bacterial, anti-fungal, anti-inflammatory, and analgesic effects of carrot seed extracts are also noteworthy. All are discussed in this review article.

Product Innovation

In the Philippines, Filipinos like pork sisig so much, that's why we thought of a product that can blend perfectly with healthy food. We discovered that the majority of our fellow Filipinos hate "Vegetables" so we thought of a "Veggies Sisig" that can perfectly blend taste by using vegetables instead of pork to have nutrients. The innovation lies in transforming into classic Filipino healthy food instead of using pork-based sisig. It brings the same sisig experience. We wanted to have a good taste and nutrients for our product. This version replaces nutritious vegetables and plant proteins.

Product Procedure

Ingredients:

- Baguio beans
- Cabbage
- Carrots
- Chayote
- Calamansi
- Green chilli
- White onion

- 1/2 all purpose flour
- Lady's choice mayonnaise
- Black pepper
- Oyster
- Margarine

Step 1: The vegetables were first thoroughly washed

Step 2: We carefully peeled to remove any outer layers.

Step 3: After peeling, they were boiled until slightly tender, ensuring they retained their shape and texture.

Step 4: The vegetables were chopped into small, uniform cubes for consistent cooking.

Step 5: Wet and dry breading mixtures were then prepared, and the chopped vegetables were evenly coated.

Step 6: Excess batter was drained before frying.

Step 7: The coated vegetables were deep-fried until golden brown and crispy, then transferred to a strainer to remove excess oil.

Step 8: To further reduce greasiness, they were patted dry using paper towels.

Step 9: A flavorful sauce was prepared separately, and the fried vegetables were thoroughly mixed with the sauce to ensure even coating.

Step 10: Additional sauce was drizzled over the mixture for enhanced flavor. Finally, the dish was garnished with freshly chopped green chili and white onion before serving

Product Diagram

Objectives

Short term

1. To provide some free taste to the people who can give feed back about the taste, the packaging style and the product in general.
2. To promote through social media: By posting pictures or videos of our product, we can encourage other people by telling them the benefits of our product.
3. To establish physical outlets in schools, markets, and events for product exposure and build business recognition.
4. To offer a limited-time discount or promotion to attract more customers.
5. To conduct taste tests to determine what can be added or removed and gather opinions to improve the product quality.

Long term

1. To collaborate with other stores to gain profit and commission (Supply to reseller).
2. To save profits for future ventures, one sets aside earnings to develop new products, fund business growth, or support investments, thereby reducing dependence on external investors or loans.
3. To develop an online pre-order and delivery system to provide convenience for local customers and enhance the business's accessibility.
4. To join bazaars, school fairs, or other contests in order to increase the customer base and gain product exposure among a broader audience.
5. To increase the team to manage the business growth and handle customer needs ensuring that the business continues to develop.

INGREDIENTS	QUANTITY	UNIT	PRICE PER UNIT	AMOUNT (QUANTITY X PRICE PER UNIT)
Carrots	¼	Kg	170	42.5
Baguio Beans	¼	Kg	140	35
Cabbage	¼	Kg	120	30
Chayote	½	Kg	60	30
Flour	½	Kg	60	30
Mayonnaise	4	Pack (220 ml)	16	64
Oyster Sauce	2	Pack (30grams)	7	14
Margarine	5	pack	10	50
Lime	1	Pack	5	5
Ground Black Pepper	1	Pack	5	5
Salt	1	Pack	5	5
Rice	5	Kilo	50	250
Garlic	2	Bulb	5	10
Green Chili	1	Pack	10	10
White Onion	0.1	Kg	240	24
Total:				604.5

-Yield: 40 pcs

-Cost per piece: 15.1

-100% mark up

-15.1 x 2 = 30.2

Selling Price: 35

Estimated:

**If 100pcs sold per
day Php 3500**

Capital Php1511.2

Profit Php 1988.75

Market Local

Market Location: Alcalde Jose, Pasig City

This location was beside of the Pamantasan Lungsod ng Pasig (PLP) and Child's Hope Hospital. We choose this location because it is strategic and accessible area with such a good foot traffic. This location is close to school where many students are coming from, this location also offers a offices, and residential areas, which means more potential customers can easily find and visit our store. This location also have a numerous karinderya's where people mostly eat like motor riders.

Target Market

Our target market primarily includes students, motor riders, and corporate employees. These groups are often looking for affordable, quick, and satisfying meal options. Our product is priced to be budget friendly. Despite its affordability, our meal offers a unique twist a healthier, Filipino-inspired healthier alternative of the classic sisig. It maintains the familiar taste that many Filipinos love but uses ingredients that are better for overall health, making it an ideal choice for those who want both flavor and nutrition on a budget.
