LAB 1.3

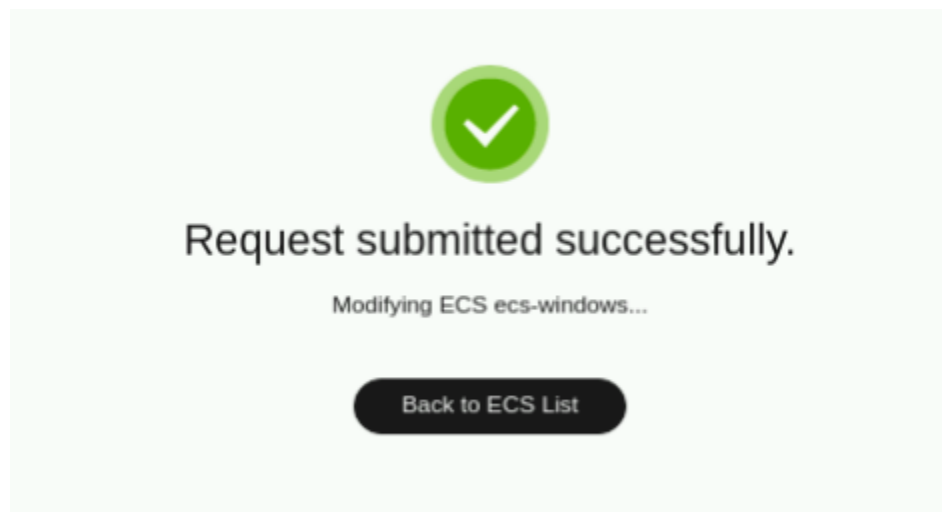

STEP 5:

Modify ECS Specifications

Details

Resource	Configuration	Current Specifications	New Specifications	Price
Elastic Cloud Server	ECS Name ecs-windows ID 4c3fee53-0fb3-4938-a045-0d7b015cae61 Billing Mode Pay-per-use	General computing s6.large.2 2 vCPUs 4 GiB	General computing s3.large.4 2 vCPUs 8 GiB	¥1.0075 /hour

☒ I have read and agree to the [Image Disclaimer](#)

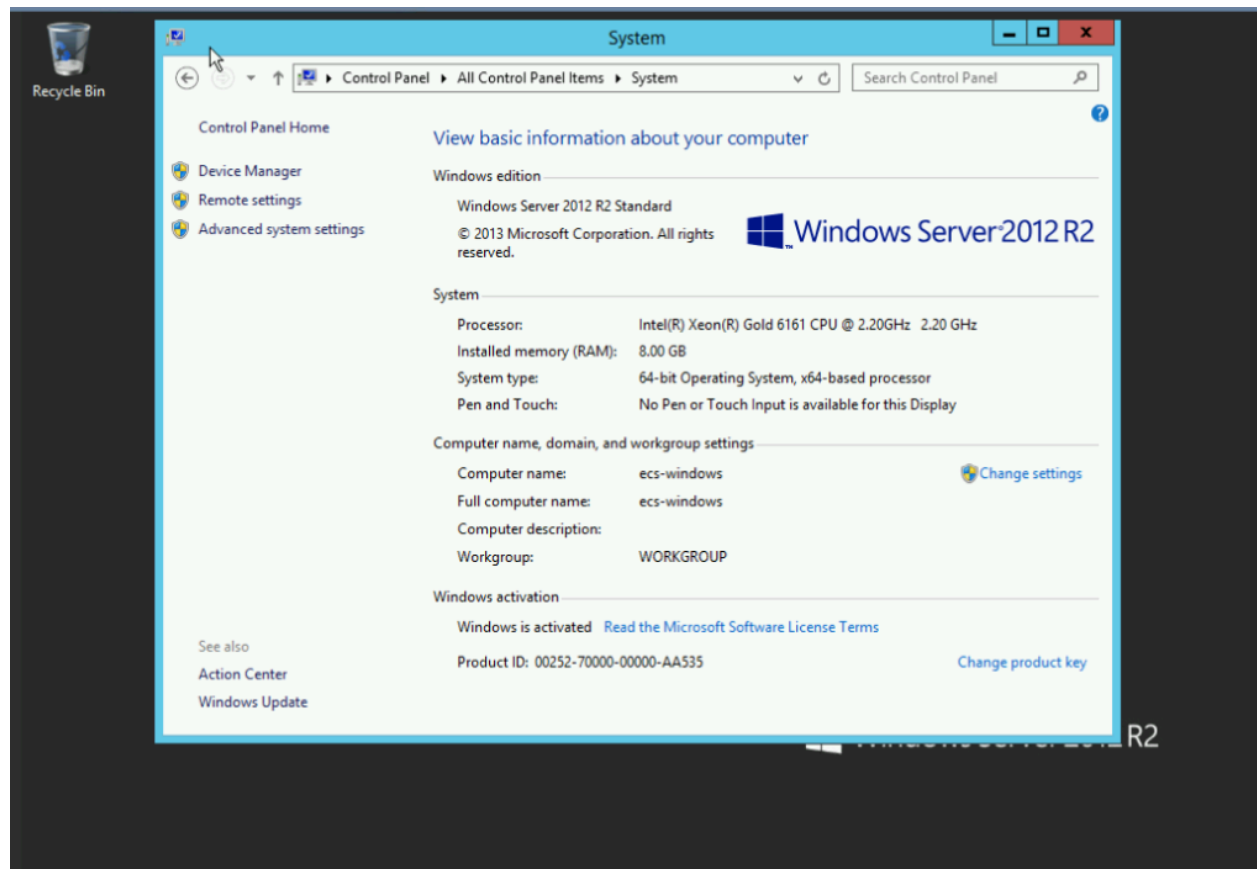

STEP 6:

Start ECS ×

Are you sure you want to start the following **1 ECS**?

Name	Status	Remarks
ecs-windows	☐ Stopped	--

RAM CHANGED FROM 4GB TO 8GB

In exactly four (4) sentences, summarize what you have learned from this activity.

- I have learned how to change the specification of a Virtual Machine. It was pretty challenging since you have to get the inputs right, specifically changing the RAM size from 4GB to 8GB. It helped me to follow instructions carefully to successfully finish the task. This activity shall be the start for students like me in creating ECS and configuring its specifications easily by carefully following a set of instructions.
