

04 Network Cloud Services

Part 1 :

Step 9

Step 15

Part 2

Step 5

Step 12

A screenshot of a terminal window with a dark background. The terminal shows a login sequence for 'ecs-opsbasic-02' as 'root'. After a password prompt, a 'Welcome to Huawei Cloud Service' message is displayed. The user then runs the command 'ping 192.168.0.198'. The output shows the IP address, the size of data sent (56 bytes), and the results of 369 ping attempts: 0 packets received and 100% packet loss, with a total time of 367999ms.

Part 3

In my opinion, using a security group helps keep our cloud servers safe by controlling who can enter or leave our network. It lets us set simple rules so only trusted people or system can connect to us. This gives us a peace of mind because we know our data is protected from unwanted access. We can focus more on our work without worrying too much about outside threat due to having security group.
